## TIMELY TOPICS

### LUNACY INCREASE. WHY?

Despite the fact that the sickness and death rate is on the decrease in old England, Dr. Forbes Winslow, the expert, declares that lunacy, according to the per cent. of population, is on the increase. It is puzzling the minds of even great men to discover why.

No doubt there are many contributing causes. The increase, by the bye, is not confined to England alone, the world's figures show that this is the case the world over. How necessary it is, then, for all contributing causes toward this dread malady to be dealt with, for nothing is more saddening than to witness a person whose reason is dethroned, and who has become a burden upon his fellows, and sometimes a menace to society.

### SKYSCRAPERS NOT WANTED

Our capital city, Edmonton, has set the country a good example in deciding to forbid the erection of skyscrapers. Strange that in a country like this, where land is so cheap and plentiful, that such a measure should be necessary.

Fancy, in a country that counts its acres by the million, and even its unsurveyed acres by the million, men bring the same thoughts and ideas as they had in Chicago or New York and strive to put them into practice by rearing buildings skyward for thirty stories or more. Surely it is not necessary. Those huge buildings are anything but beautiful. They shut out God's sun from the gaze of those down below as well as from those in the huge buildings.

Let our cities spread out and give themselves breathing space. The day has not yet come when we need to build hotel towers.

### WHERE IS TATT?

Theodore Roosevelt has renounced his determination to try his hardest between now and November to be elected for president, and has said that his platform will be in favor of Socialism or Anarchism, or perhaps both in doing this he gives the impression that Anarchism is akin to Socialism, which is wrong. Anarchism is destructive of law and order and of the social system, whereas Socialism, while it would change the present order, it would also bring in a more equitable order. What does Teddy mean? No doubt we shall see presently.

Dr. Wilson, the governor, on the other hand declares for justice and right, an order of things that has not been seen in the United States in any great measure for years. He also outlines his conception of the use of tariffs. He declared that of late years tariff has not been business. It has been politics. And therein he is right. America is getting tired of tariff being politics, and we think Canada is affected the same in regard to tariff being politics. The past method he declared also fostered privilege. It was instituted to put money into manufacturers' hands, and that is not the

honest business of tariff.

Tariff should be placed for the purpose of raising revenue for the support of the government, and not for any particular class. Wilson's tone is honest, and it seems as though he will stand a good chance.

But where is Tatt? He is perhaps hiding in the tall grass until one of the other two makes a slip, then he will come out with a liere and a flourish of trumpets. It looks as though Mr. Tatt has seen all the terms he is likely to get as president.

### ARTIFICIAL RUBBER

Scientists are now bending their energies toward the manufacture of real rubber by artificial process. In this process liquid fuel for motors will be one of the products. The ingredients needed for the manufacture of rubber are cereals and potatoes, starch and fusel oil. The latter is extensively used, and it is thought that if a cheap way of producing it can be discovered it will tend toward minimizing the difficulty in producing rubber in large quantities. It is also thought that this discovery will prove of great importance in the manufacture of celluloid and artificial leather and other industries. Seeing that rubber is so extensively used in our day, such an important discovery as its manufacture is of vast interest. It is astonishing what discoveries men make who are able to concentrate their minds upon such matters.

It appears that starch is converted into either of two substances, acetone or fusel oil by fermentation. These substances then, by chemical means, converted into isoprene, the raw product from the artificial rubber is produced. The isoprene can quickly be converted into rubber, owing to a discovery made by a Dr. Matthews, and metallic sodium causes the change to take place very rapidly. We can only wish success to all such researches.

### Kill the Flies

The hot weather season makes it important to know something about the newest methods of getting rid of flies. To clear a room of flies, carbolic acid may be used in this way: Heat a shovel or any similar article and drop thereon twenty drops or carbolic acid, the vapor circulating through the room will kill the flies.

A cheap but perfectly reliable fly poison, one which is not dangerous to human life, is bicarbonate of potash in solution. Dissolve one dram, which can be bought at any drug store, in two ounces of water, and add a little sugar. Put some of this solution in shallow dishes and distribute them about the house.

Sticky fly paper, and liquid poisons are among the things of use in killing flies, but the latest, cheapest and best is a solution of formalin or formaldehyde in water. A spoonful of this liquid put into a quarter of a pint of water and exposed in a room will be enough to kill all flies.

To quickly clear the room where there are many flies, burn pyrethrum powder in the room. This stupefies the flies, when they may be swept up and burned. Pyrethrum powder is harmless and is made by grinding the dried flowers of a plant. Moisten the powder a bit, press it into a little cone and light the top of it with a match.

# SCIATICA AND LUMBAGO

SUFFERED FOR TWENTY-FIVE YEARS AND COULD GET NO RELIEF

Now Tells of the Wonderful Results Obtained by the Use of

## DR. CHASE'S NERVE FOOD

Sciatica, neuritis and sciatic rheumatism are the result of a run-down nervous system. For this reason all treatments must necessarily fail which do not build up the nervous system.

Mr. Collins suffered for twenty-five years and never was able to obtain satisfactory treatment until he began the use of Dr. Chase's Nerve Food and Kidney-Liver Pills. While the Nerve Food forms new blood and restores the exhausted nervous system, the Kidney-Liver Pills invigorate the action of kidneys, liver and bowels.

Mr. W. T. Collins, Morphett, Ont., writes: "It affords me great pleasure to be able to speak favorably of the use of Dr. Chase's medicine. I have been afflicted with sciatica, lumbago and neuritis and tried almost all the medicines I could hear of, without obtaining any benefit, until I commenced to use Dr. Chase's. I noticed a marked improvement after I had used two boxes, and the benefits obtained have been so great that I have recommended them to dozens of my friends, but I have yet to hear of a single case where they failed to give satisfaction."

Dr. Chase's medicines are sold by all druggists or Edmondson, Bates & Co., Limited, Toronto.

### Origin of Electric Tires

The amperes which is the unit of volume, in French, taken from the name of Andre Marie Ampere, who formulated the science of electricity. The volt which is the unit of the pressure which causes the current to flow is Italian. The watt, which is the unit of energy, and the product of the volt and amperes, is named after the English physicist. The ohm, which is the measure of resistance, is named after the German physicist. The United States boasts only one electric term so far, the henry, which is the unit of self-induction—Scientific American.

### Take Their Chances

And now that you are through college, what are you going to do? I shall study medicine.

Rather choose profession already laid out for me.

Can't help that. I shall study medicine, and those who are already in the profession will have to take their chances, that's all—London Opinion.

Said the holy chaplain to the marine, to whom he was endeavoring to demonstrate the undesirability of the booze: "After all, Bill, you must reflect that in all cases of drunkenness, the only cure is to get drunk."

My dear friend, you are right. But to be found any animal except man, that makes sense.

Yes, he agreed, and you won't find either any other animal in all creation that could do so.

My dear friend, you are right. But to be found any animal except man, that makes sense.

Yes, he agreed, and you won't find either any other animal in all creation that could do so.

My dear friend, you are right. But to be found any animal except man, that makes sense.

Yes, he agreed, and you won't find either any other animal in all creation that could do so.

My dear friend, you are right. But to be found any animal except man, that makes sense.

Yes, he agreed, and you won't find either any other animal in all creation that could do so.

My dear friend, you are right. But to be found any animal except man, that makes sense.

Yes, he agreed, and you won't find either any other animal in all creation that could do so.

My dear friend, you are right. But to be found any animal except man, that makes sense.

Yes, he agreed, and you won't find either any other animal in all creation that could do so.

My dear friend, you are right. But to be found any animal except man, that makes sense.

Yes, he agreed, and you won't find either any other animal in all creation that could do so.

My dear friend, you are right. But to be found any animal except man, that makes sense.

Yes, he agreed, and you won't find either any other animal in all creation that could do so.

## THE LONELIEST SPOT ON EARTH.

Tristan da Cunha is a Tiny Oasis in a Wilderness of Water.

When Napoleon was sent to St. Helena it was thought that the loneliest spot on earth had been reached. It is a small island in the Atlantic, 1,400 miles away from a continent that is 1,400 miles from the nearest land. It is a tiny oasis in a wilderness of water, so from it is which direction you go.

It is a rocky and old girl little island, with a solitary mountain 1,600 feet high rising steeply from the midst. Yet on this lonely spot the grass and earth there lives a community consisting of only six people, and the rest of the world. They are farmers, cattle raisers and shepherds. The values of the island are fertile fields, where potatoes mainly are grown. The food of the people consists for the most part of beef, mutton, fowls, potatoes and fish.

Lonely and desolate to produce many fruits and vegetables which can no longer be grown there. The reason of this is that the island for a long time was overrun by rats which escaped from the ships and have been unable to kill the people have been unable to kill the rats. It is a terrible story, and is a terrible story.

A FORTRESS OF THORNS.

Curious Nest of the Little Brown Wren of Central America.

The little brown wren of Central America builds a nest of mud about two feet apart. Across these two branches are laid two more branches, and so on, until the nest is complete. The nest is built in a hole in the ground, and is surrounded by a fence of thorns. The nest is built in a hole in the ground, and is surrounded by a fence of thorns.

When Midway Men looks for a home, says a writer in the *American*, he selects a tree where two branches lie parallel about two feet apart. Across these two branches are laid two more branches, and so on, until the nest is complete.

The nest is built in a hole in the ground, and is surrounded by a fence of thorns. The nest is built in a hole in the ground, and is surrounded by a fence of thorns. The nest is built in a hole in the ground, and is surrounded by a fence of thorns.

Next a covered passageway is built from the nest to the end of the platform, and the wren is ready to move. The nest is built in a hole in the ground, and is surrounded by a fence of thorns. The nest is built in a hole in the ground, and is surrounded by a fence of thorns.

The nest is built in a hole in the ground, and is surrounded by a fence of thorns. The nest is built in a hole in the ground, and is surrounded by a fence of thorns. The nest is built in a hole in the ground, and is surrounded by a fence of thorns.

## THE GRAIN COMBINE.

Past and Present.

Persistence and determination are admirable qualities in grain growers, who are exercised in a good cause, but when these virtues are prostituted to minister to selfishness they are dangerous to the community and must be related with equal persistence and determination.

It is the situation in Northwest Canada today. On one hand stands a thoroughly united band of grain dealers, and on the other hand there are the farmers, the producers of the country. The grain men are using every means in their power to exploit the farmers.

The history of the grain trade in the West is one of a continual struggle by the grain producers for fair treatment at the hands of the grain dealer. The struggle dates back to the early eighties when the first freight was paid to the lowest level.

The grain men refused to pay the freight, and caused much suffering all through the southern part of Manitoba. Not only farmers, but merchants who were dependent on the price of wheat, were in a bad way.

The grain men refused to pay the freight, and caused much suffering all through the southern part of Manitoba. Not only farmers, but merchants who were dependent on the price of wheat, were in a bad way.

Many of the farmers in this district are cutting their fall wheat this week. Cutting is expected to be general next week.

The following camping party left for the hills on Monday: Mr. and Mrs. Fred. H. Scragg, Miss Edith Scragg W. Armstrong and Master Charlton Wickens.

Mr. Wm. Caspell had the misfortune to fall from the roof of an addition he is building to his barn. Fortunately no bones were broken but Mr. Caspell was badly bruised and shaken up.

The Wickens Bros. have purchased the south-east corner on Railway street, formerly the Johnson property, whereon stood the old post office, that building being removed at the back, opposite the Macdonald block. A new grocery store is being built by the Wickens Bros. on the corner.

On Monday next, Aug. 19th, the Rev. Chas. Huestis, M.A., will visit Cayley to represent the B.C. and Alberta branches of the Lord's Day Alliance. Most everybody is interested in the work of this Society. Mr. Huestis is an acceptable speaker and will be able to give some interesting information respecting the work of the Alliance in the two provinces as well as in the whole of Canada. The meeting will be held in the Presbyterian hall at 8 o'clock p.m. A very urgent request is made for all who are interested in the observance of the Lord's Day to be present.

The Methodist Ladies' aid is preparing for the rainbow social, which is to be held on Thursday, August 15th, at the home of Mrs. W. T. Walker. The decorations are in the charge of Miss Ash. The grounds will be illuminated as well as decorated, and games of various descriptions will be played. Admission is free. Refreshments will be on hand, such as ice cream and cake, at moderate prices. The Methodist Sunday school, by kind permission, is also meeting earlier in the evening at the same place. The usual races will be run and prizes distributed. Parents and friends are heartily invited to this united gathering. Come along early and have the time of your lives.

## The Care of Cream

It is a recognized fact that the price received for butter is very largely influenced by its quality, and this is in great measure determined by the care given the cream from which it is made. This matter is recognized by the department of agriculture at Ottawa as being of vital importance to the creamery patrons and buttermakers of Canada; consequently, there has been prepared by the chief of the dairy division, under the direction of the dairy commissioner, a bulletin on "The Care of Cream for Buttermaking." It commences with the health and feeding of the cows, and follows the subject through the various stages of milking, separating, storing and delivering the cream, each section being dealt with from the standpoint of the man on the job rather than of the official in an office. The results of experiments conducted on farms and in creameries are given to show the advantages of separating a rich cream, properly cooling and storing it, as well as of making frequent deliveries. The bulletin says:—"Keeping the cream for longer than two days at the farms has, no doubt, much to do with the old cream flavor so common in gathered cream butter, and we can scarcely expect to have this defect remedied so long as cream is gathered less than three times each week."

The bulletin, which is No. 32, of the dairy and cold storage series, concludes with a summary of important notes for patrons, creamery owners and buttermakers. Sufficient copies have been issued to supply each creamery with a copy for each patron. Requests for supplies for this purpose should be sent to the dairy and cold storage commissioner, while individual copies may be received from the publications branch of the department of agriculture at Ottawa. This bulletin is issued by authority of the Hon. Martin Burrell, minister of agriculture.
